PROFESSIONAL SUMMARY

Senior Quality Analyst with 7+ years of experience leading User Acceptance Testing (UAT) processes, product rollout into production, and quality audits across Retail, Ecommerce, Insurance, Banking, Blockchain, and Healthcare domains. Skilled in monitoring SDLC standards and procedures, performing root cause analysis, and gathering and reporting quality metrics to drive continuous improvement. Proven track record architecting scalable automation frameworks (Python, Selenium WebDriver, Appium, Playwright) and performing API validation and integrity testing, reducing regression cycle time by up to 60%. Experienced of AI-Powered testing, mentoring and advising QA engineers; and partnering with stakeholders drive stable production releases.

CORE COMPETENCIES

- **UAT & Production Rollout:** UAT Process Ownership, Product Rollout Coordination, Release Readiness & Sign-off
- **Quality Audits :** Process Monitoring, SDLC Standards & Documentation, Root Cause Analysis, Quality Metrics Reporting, Risk Assessment & Escalation.
- **AI Driven Testing:** AI driven automation and manual testing, Generative AI Application Testing, Python & Selenium Test Automation
- **Mobile Automation:** Appium, Flutter Driver / Integration Test, Robot Framework
- **Web Automation:** Selenium WebDriver, Playwright
- **API & Web Services Testing:** Postman, RestAssured.
- **Test Frameworks & BDD:** TestNG, Cucumber (BDD), Pytest & Data-Driven Frameworks, Page Object Model (POM)
- **Manual & Functional Testing:** Functional, Regression, Sanity, Smoke, Integration, End-to-End (E2E), UAT, Cross-Platform Testing (Android, iOS, Web, POS)
- **Performance & Load Testing:** JMeter
- **Test Management & Defect Tracking:** JIRA, Mantis, TestRail, Confluence
- **Programming & Scripting:** Java, Basics of SQL, Python (Playwright/Selenium), Dart, JavaScript
- **CI/CD & Build Tools:** Jenkins, GitHub Actions, Azure DevOps, Maven, Git/GitHub
- **Cloud & Device Testing Platforms:** BrowserStack, AWS Device Farm, Firebase Test Lab, LambdaTest
- **Methodologies:** Agile (Scrum, Kanban), Waterfall, STLC, Continuous Testing
- **Domain Expertise:** Blockchain, Fintech, Banking, Healthcare, Social Platforms, Investment & Loan Applications
- **Leadership:** Test Strategy & Planning, QA Team Leadership & Mentoring, Agile Release Management, Client & Stakeholder Management, Advisor to Junior Team Members

PROFESSIONAL EXPERIENCE

Senior Quality Analyst | Winjit Technologies Pvt. Ltd., Pune, India

2019 – Present (7+ Years)

- Own UAT process initiatives and product rollout into production for blockchain payment gateway, banking, and fintech products, making recommendations for solutions and improvements that ensured stable production-critical defects across releases.
- Conduct complex process monitoring, product evaluation, and quality audit assignments across the SDLC; report issues and independently recommend solutions and enhanced documentation for standards and procedures.
- Establish and maintain project quality standards and procedures, ensuring they are clearly documented.
- Identify risks and recommend mitigations, appropriately assessing business risk with consideration for regulatory compliance and client impact.
- Actively participated in Scrum ceremonies and Agile activities, contributing to sprint planning, backlog refinement, daily stand-ups, sprint reviews, and retrospectives while collaborating with developers, product owners, and stakeholders to identify risks, clarify requirements, and ensure successful sprint delivery.

- Document findings and perform root cause analyses on defects and process gaps; independently recommend solutions and improvements to existing standards, collaborating across technology teams to develop new standards and procedures.
- Track corrective actions through to completion, verify traceability across project work products, and gather, maintain, and report on quality metrics for leadership and stakeholders.
- Act as advisor and mentor to junior QA engineers, upskilling the team on automation best practices, framework design, and API testing, and providing evaluative judgment on complex, novel testing scenarios.
- Architect and implement enterprise automation frameworks using Python, Selenium WebDriver, Appium, TestNG, and Cucumber, reducing regression cycle time by 60% and increasing defect detection rate by 40%.
- Perform rigorous validation using API testing and quality across banking and payment systems ahead of production release.
- Apply GenAI-driven QA practices to evaluate AI/ML and Generative AI application performance and robustness, supporting the team's readiness for AI-focused quality engineering.
- Collaborate with Product Owners and Business Analysts during requirement analysis, identifying gaps and ambiguities to reduce downstream defects and support sound, diplomatic communication of complex information.
- Directed manual and automation testing for compliance-critical banking applications, achieving zero-defect production releases and full regulatory sign-off.
- Identified and resolved 500+ defects across projects through rigorous root-cause analysis, significantly reducing production incidents and improving client go-live outcomes.

KEY PROJECTS

EPOS – Blockchain Crypto Payment Gateway

Technologies: Blockchain, Crypto Testing, Web Testing, POS Testing, Shopify

- Directed functional, regression, and sanity test coverage for a blockchain-based crypto payment gateway, achieving ~90% coverage of critical transaction scenarios.
- Led end-to-end (E2E) testing of payment flows across POS and web channels, achieving ~95% transaction coverage and ensuring reliable crypto payment processing.
- Own UAT process initiatives and product rollout into production for blockchain payment gateway, banking, and fintech products, making recommendations for solutions and improvements that ensured stable production-critical defects across releases.

Momentum Money (Mobile App & Web App)

Technologies: Flutter, Dart Automation, Flutter Framework, Git, Selenium

- Led QA for a security-focused app redesign, building and maintaining an automation suite covering ~85% of core functionality across mobile and web.
- Partnered with clients and cross-functional teams on functional, regression, and integration testing to ensure high-quality, secure deliverables.

RBL Mobank 2.0

Technologies: Appium, Java, TestNG, Cucumber, AWS Device Farm, Firebase Test Lab

- Prepared a custom automation framework with dynamic test data handling, covering ~85% of regression scenarios for a large-scale banking application.
- Directed cross-platform testing across AWS Device Farm and BrowserStack, leveraging Firebase Test Lab Robo Run to ensure high-quality, repeatable software delivery.

SA Taxi – Optima

Technologies: Selenium, TestNG, Java, Automation Testing

- Automated end-to-end loan origination workflows, covering ~85% of business-critical processes to accelerate regression cycles.
- Led regression and deal automation testing, validating system functionality and data integrity to ensure accurate financial processing.

GL Mapping Solutions (GLMS) – Ledger Book

Technologies: Selenium, TestNG, Java, Cucumber

- Delivered BDD-driven automation using Cucumber, covering ~80% of functional flows across GLMS modules.

- Validated integration between loan origination and reporting systems, ensuring functional accuracy and seamless data flow.

Kotak LEAP

Technologies: Manual Testing, Android, iOS, Platform Comparison Testing

- Directed functional and cross-platform comparison testing, covering ~90% of app features across Android and iOS.
- Verified functional consistency and reliability, coordinating defect resolution with development teams.
- Perform rigorous validation using API testing and quality across banking and payment systems ahead of production release.

Safe Paths

Technologies: Manual Testing, Android, iOS

- Led comprehensive manual testing covering ~85% of core functionalities, ensuring accuracy, reliability, and compliance with health data standards.
- Document findings and perform root cause analyses on defects and process gaps; independently recommend solutions and improvements to existing standards, collaborating across technology teams to develop new standards and procedures.

CIB Assist Solution

Technologies: Android, iOS, WhatsApp Bot

- Directed regression testing of mobile app and WhatsApp Bot workflows, covering ~80% of core interactions.
- Act as advisor and mentor to junior QA engineers, upskilling the team on automation best practices, framework design, and API testing, and providing evaluative judgment on complex, novel testing scenarios.

Pothol Patrol

Technologies: Android, Web

- Led release management activities for critical production releases, coordinating with cross-functional teams to ensure smooth and timely deployments.
- Conducted stakeholder and client demos to showcase new features, gather feedback, and align product delivery with business requirements.
- Owned release decisions, test plan, and test strategy planning as part of Agile sprint planning.
- Collaborated with product owners, developers, and QA teams to clarify requirements, prioritize testing efforts.

CERTIFICATIONS

- GenAI for QA – Masterclass in Testing & Automation (2025), Udemy [\[Link\]](#)
- QA Automation, Winjit Technologies
- Software Testing Tutorials, Great Learning
- Playwright Python Automation testing (2026), Udemy [\[Link\]](#)

ACHIEVEMENTS

- Received Five **Extra Miler** Awards for exceptional ownership, automation initiatives, and business impact.
- Honored with Two **Excellence in Quality** Awards for delivery excellence.
- Business First – Agility Award for delivering an **AI-powered business solution** beyond core responsibilities.
- Consistently recognized by clients and leadership for quality and reliability of delivery.

EDUCATION

Bachelor of Engineering, Electronics & Telecommunication (E&TC) — Pune Institute of Technology, Pune | CGPA: 9.10 / 10 | 2016 – 2019

Diploma in Electronics — Government Polytechnic, Kolhapur | Percentage: 88.25% | 2013 – 2016
